	Mineral / Premix	Equine Vitamin Mineral Premix / MF Horse Vitamins & Minerals				

Getting the Most out of your Horse Feed

FEEDING RATES: The horse has a small stomach and grain feeding should be controlled to minimize digestive problems. Depending on the size of the horse, offer maximum of 1.5 to 2.5 kgs of feed per feeding. The total Masterfeeds diet should be fed in a minimum of two meals daily.

MAKE DIET CHANGES SLOWLY: When changing diets, replace existing diet over a 5 to 10 day period. When changing feed amounts, restrict the change to 0.5 to 0.75 kgs and allow three days between changes.

The feeding ranges in the Masterfeeds Horse Feeding Guide are guidelines only. The correct feeding rate will be influenced by hay or pasture quality, body weight and desired weight changes of the horse and individual performance capabilities. The quantity of hay outlines can be replaced by pasture. As the quantity of grain intake increases, forage intake will decrease. In most cases free choice hay is recommended. Provide fresh clean water at all times.

To set up a feeding program for your horse, please contact your Masterfeeds Dealer or Representative.
